

STORM PROTECTION FROM

HURRICANE
ARMOR

**New
technology for
protecting
residential and
commercial
buildings from
hurricane
winds and rain.**

hurricanearmor.net

Hurricane Armor is a flexible hurricane wind and rain barrier that exceeds Florida Building Code standards for impact protection. This extremely strong fabric is engineered to combine strength with lightweight and durability. The system allows you to see through the material when it is in place. The flexible screen can be folded for easy compact storage.

The system combines this screen with stainless steel anchoring points to create an impact protection screen that deflects windblown debris and rain that causes damage during a hurricane. Hurricane Armor allows visibility and light into protected structures while effectively eliminating high winds and driving rain.

Before

Installed

- 120 mph wind is reduced to 5 mph behind the screen
- Strong, Durable Polypropylene fabric that is lightweight
- Eliminates Debris and Water damage
- Deployed quickly and easily
- No maintenance

- Easy installed into new or existing buildings
- Protects large and unusual openings
- 10 year warranty
- Cost effective, 50% less than roll-down shutters
